HELICOPTERS, INC.

GULF COAST DIVISION
LAKE CHARLES, LOUISIANA

PROCESS SPECIFICATION

Scope: This specification outlines the requirements for fabricating and installing the Pump Mounting Plate for the 412 Auxiliary Fuel Tanks.

Conformation: This specification does not conform to any existing government specification.

Subcontractors: MESH PLASTICS, LTD. of Lake Charles, Louisiana, or its subcontractor shall be the only subcontractors qualified to construct the FRP requirements and shall comply with this process specification. Any deviations or variations are to be submitted to ERA for approval with proper documentation prior to fabrication.

Conflicts: In the event of a conflict with engineering drawing(s) and this specification, the drawing(s) shall govern.

Paraffinated Styrene	TF-100	Industrial Chemicals Atlanta, GA
Grinding Discs	36 Grit Type D 60 Grit Type C 80 Grit Type C	3M Corp. St. Paul, MN
Mold surface	Black Tooling Gel	Glidden
Rigid Polyurethane Foam	P-2045 STD	Isotech Int'l Houston, Tex.

PAGE 4 of 14

A. FABRICATION

- 1) Inspect molds for defects (ie. chips, cracks, crazing, etc. ...).
DO Not proceed until any defect is corrected.
- 2) Apply mold release agent(s) according to manufacturer's instructions to molds.
- 3) Apply layer of 10 mil veil to mold surface. Saturate completely with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers. THIS STEP IS USED ONLY ON MOLD A. ALL FOLLOWING STEPS APPLY TO MOLDS A & B.
- 4) Apply one layer of 3/4 oz. type E glass mat. Saturate completely with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers.
- 5) Apply second layer of 3/4 oz. type E glass mat. Saturate completely with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers.
- 6) Apply third layer of 3/4 oz. type E glass mat. Saturate completely with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers.
- 7) Allow laminate to exotherm and cool down. Trim excess laminate that protrudes from mold.
- 8) Fill stiffener void with paste made from 2 parts Derakane 470-36 resin containing UV inhibitor and three parts Q-Cell 200.
- 9) Allow to exotherm and cool down. Sand excess smooth.
- 10) Apply one layer of 3/4 oz. type E glass mat. Saturate completely with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers.
- 11) Clamp both molds together before resin gels. Allow to cure for 4 hours.
- 12) Remove sump plate from mold and trim to final dimensions. Cut holes.
- 13) Check thickness at 12 locations. Throw out high and low and record average. Thickness shall not be less than .180"
- 14) Sand an area 2" around the top surface of the plate using 36 grit type D discs. Scuff an area 1" beyond that with 40 grit DA paper.

B. INSTALLATION

- 1) Check for proper alignment. Secure pump mounting plate using putty in 3 or 4 small areas around edge. Allow to set until putty hardens.
- 2) Pour 2 part Urethane expansion foam in areas around pump mounting plate that is not bonded by putty, allowing foam to flow into the cavity between the stiffener and the tank wall. Repeat until cavity is full and foam is oozing out of voids around plate. Allow foam to set and harden. (Approximately 1 hour.)
- 3) Trim excess foam off even with the pump mounting plate. Re-scuff areas contaminated by foam with 36 grit type D discs.
- 4) Check for proper alignment in tank and putty in place. Allow to cure.
- 5) Drill hole and install nut insert according to Process Spec. 1013.
- 6) Apply one layer of 3/4 oz. type E glass mat lapping 1-1/2" on the plate and on the tank wall. Saturate completely with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers.
- 7) Apply second layer of 3/4 oz. type E glass mat lapping 1-1/2" on the plate and the tank wall. Saturate completely with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers.
- 8) Apply third layer of 3/4 oz. type E glass mat lapping 1-1/2" on the plate and the tank wall. Saturate completely with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers.
- 9) Apply fourth layer of 3/4 oz. type E glass mat lapping 1-1/2" on the plate and the tank wall. Saturate completely with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers.
- 10) Apply one layer of 10 mil veil over the wet mat, making sure the veil extends over all mat fibers. Saturate with Derakane 470-36 resin containing UV inhibitor. Deaerate with serrated rollers.
- 11) Allow to cure for a minimum of 4 hours.

INSPECTION

It is the purpose of the inspection to verify that each part has been fabricated in accordance with and meets the requirements of this specification.

RESPONSIBILITIES: It is the responsibility of the fabricator to make available to ERA Helicopter or his authorized representative any or all of the following:

Records: Records pertaining to the part(s) being purchased shall be supplied when requested. These may include:

- Materials specifications
- Equipment drawings or mold jig
- Materials test results.
- Dimensional verification reports.
- Rework and repair reports.

MATERIALS:

Raw materials used for laminates shall be virgin materials and shall be free of contaminants as described on pgs. 12, 13, 14, and 15.

FABRICATED PARTS: The part to be inspected shall be properly located and positioned, and shall be in condition to permit safe and thorough inspection. Reasonable means shall be provided to permit the inspector to visually examine the entire inner and outer surfaces of the part.

Allowable defects are listed on pgs. 10 and 11.

The following inspection tools and equipment shall be made available for use by the inspector.

- Barcol hardness tester.
- Acetone squeeze bottle with acetone.
- Extension cord with ground fault switch.
- A vapor tight inspection light.
- Thickness gauge.

INSPECTION

TEST OF FINISHED
PARTS:

The following basic tests shall be included as a minimum in the Acceptance Inspection.

Barcol Hardness Test - A test of resin cure shall be made in accordance with ASTM D2583. Take 10 readings, discard highest and lowest, average the remaining readings. Minimum acceptable average reading is 30.

Surface Cure Test - An acetone test shall be used to detect surface inhibition on surfaces exposed to air during cure. The procedure that shall be used is the following: rub a few drops of acetone on the surface and check for tackiness after the acetone has evaporated. Persistent tackiness indicates incomplete cure.

Dimensions - The inspector shall be provided with copies of all approved drawings or mold jigs.

OTHER APPLICABLE DOCUMENTS:

ASTM Standards

C 581-74-Test Method for Chemical Resistance of Thermosetting Resins Used in Glass Fiber Reinforced Structures.

D 638-77a-Test method for Tensile Properties of Plastics.

D 790-71-Test Methods for Flexural Properties of Plastics and Electrical Insulating Materials.

D 883-78a-Definitions of Terms Relating to Plastics.

D 2583-75-Test Method for Indentation Hardness of Rigid Plastics by Means of a Barcol Impressor.

ALLOWABLE DEFECTS

Defect	Surface inspected
Cracks(through part)	None
Crazing (fine surface cracks)	Max dimension 1/2 in., max density 5 per sq. ft. min 2 in apart
Blisters(rounded elevations of the laminate surface over bubbles)	Max 1/4 in., dia x 1/8 in. high, max 1 per sq ft, min 2 in apart
Wrinkles and solid blisters	Max deviation, 20% of wall thickness but not exceeding 1/8 in.
Pits(craters in the laminate surface)	Max dimensions, 1/8 in dia x 1/16 in deep, max density 10 per sq. ft.
Surface porosity(pin-holes or pores in the laminate)	Max dimensions, 1/16 in dia x 1/16 in deep, max density 10 per sq. ft.
Chips	Max dimension of break, 1/4 in, and thickness no greater than 20 percent of wall thickness, max density 1 per sq ft
Dry spot(nonwetted reinforcing)	Max dimension, 2 sq in. per sq ft
Entrapped air (bubbles or voids in the laminate)	1/8 in. max dia, 4 per sq in. max density; 1/16 in. max dia. 10 per sq in. max density

ERA PS 1007REV IRDATE 1/22/87

ALLOWABLE DEFECTS

<u>Defect</u>	<u>Surface inspected</u>
Exposed Glass	None
Burned Areas	None
Exposure of cut edges	None
Scratches	Max length 1 in. max depth 0.010 in.
Foreign Matter	1/16 in.dia, max density 1 per sq ft

FIBERGLASS SURFACING MAT

1.0 Scope

1.1 The scope of these procedures is to describe the visual, physical and mechanical parameters which characterize fiberglass surfacing mat used by the fabricator.

2.0 Definitions

2.1 Fiberglass Surfacing Mat - A random arrangement of glass fibers bonded with a binder to form a thin porous mat which is supplied in roll form. Surfacing mat is usually used to reinforce the corrosion resistant resin rich liner on the inside of equipment and to provide a smooth surface on the exterior of equipment.

2.2 Binder - Chemical treatment applied to the jackstraw arrangement of glass fibers to give the mat integrity. Specific binders are utilized to promote chemical compatibility with the various laminating resins used.

2.3 Slugs - Unfiberized beads of glass.

3.0 Requirements

3.1 Visual Requirements - Each roll of fiberglass surfacing mat shall be inspected to insure it is consistent in color, texture and appearance. Any holes, cuts or visual irregularities shall be removed from the mat prior to or during fabrication.

3.1.1 Slugs - Mat which contains more than four slugs per 100 lineal feet is rejectable.

3.1.2 Wrinkles - Crosswise wrinkles or waves that are visible at a 45 deg. angle and lengthwise wrinkles that can be readily flattened under pressure and that do not crease or change the dimensions of the mat are acceptable.

3.1.3 Wet Spots and Bar Marks - The mat shall be free from these defects.

3.1.4 Delamination - The mat shall not delaminate, i.e. shall not separate into layers in coming off the roll.

FIBERGLASS SURFACING MAT

3.2 Physical Properties

3.2.1 Thickness - The thickness of the mat in each roll shall be measured.

3.3 Packaging Requirement - Packaging shall be visually inspected to assure proper labeling and that the package is free from damage that may render the mat unusable.

3.3.1 The mat shall be packaged in an unbroken carton as shipped from the mat manufacturer's factory. The mat used shall not be repackaged in the distribution of the mat after the manufacturer has shipped the mat.

3.4 Documentation - It is the responsibility of the fabricator to maintain records showing the results of all material testing. This information shall show at a minimum, the following:

- (a) Form of material
- (b) Manufacturer
- (c) Manufacturer's product description including binder type (treatment)
- (d) Manufacturer's product code
- (e) Production date, if available, or production code on carton.
- (f) Property measured and value recorded

- * Visual inspection
- * Width
- * Thickness
- * Packaging

- (g) Job number (Internal Fabricator Control Number)
- (h) Fabricated part identification number

FIBERGLASS CHOPPED STRAND MAT

1.0 Scope

1.1 The scope of these procedures is to describe the visual, physical and mechanical parameters which characterize fiberglass chopped strand mat used by the fabricator.

2.0 Definitions

2.1 Chopped Strand Mat - Chopped strand mat is made from randomly oriented glass strands which are held together in mat form using a binder. Each strand contains a sizing.

3.0 Requirements

3.1 Visual Requirements - Each roll of chopped strand mat shall be inspected to insure it is consistent in color, texture and appearance. It shall be free from surface irregularities, fluffy masses, dirt spots or other foreign material; water spots, knots, binder spots larger than 2" in diameter, clumps of strands and tears or holes which may result from removal of defects.

3.2 Physical Requirements

3.2.1 Weight - The square foot weight of the mat shall be measured for each carton of mat used. All specimens shall fall within the range specified for the product.

3.3 Packaging Requirement - Packaging shall be visually inspected to assure proper labeling and that the package is free from damage that may render the mat unusable.

3.3.1 The mat shall be packaged in an unbroken carton as shipped from the mat manufacturer's factory. The mat used shall not be repackaged in the distribution of the mat after the manufacturer has shipped the mat.

FIBERGLASS CHOPPED STRAND MAT

3.4 Documentation - It is the responsibility of the fabricator to maintain records showing the results of all material testing. This information shall show at a minimum, the following:

- (a) Form of material
- (b) Manufacturer
- (c) Manufacturer's product description including binder type (treatment)
- (d) Manufacturer's product code
- (e) Production date, if available, or production code on carton.
- (f) Property measured and value recorded
 - * Visual inspection
 - * Width
 - * Thickness
 - * Packaging
- (g) Job number (Internal Fabricator Control Number)
- (h) Fabricated part identification number
